

# All Patio's Furniture Refinishing Process:

- 1) **Sand Blasting:** This removes the existing finish and any rust or corrosion that the furniture may have leaving the bare metal prepared for the new powder coat finish.
- 2) **Inspection:** this is the stage where any cracks, breaks, or bends can be assessed & addressed. Additional charges for special welds may apply.
- 3) **Powder Coating:** A process where powder coat paint is electrostatically applied and cured under 400-degree temperatures to create a thick, durable finish to withstand outdoor elements.
- 4) **Strap & Sling Installation:** Vinyl straps are installed where applicable: vinyl is designed to resist fading & mildew. Sling fabrics are cut, sewn to size, and installed using special tools by our master craftsmen.
- 5) **Glides:** New glides are added to ensure protection of newly refinished furniture. Glides will protect the furniture legs from scratching as well as protect the floor they will sit on.
